

U.S. Ser. No. 08/444,790

Examiner Howard

Group 1646

July 7, 2011 Interview agenda

- (1) Points from Board decision relevant to continued examination
  - a. Prior art basis of rejection that was reversed
  - b. Significance of unexpected results in reversing original obviousness rejection
- (2) Discuss new rejection
  - a. New combination of Smith and Capon is a weaker obviousness case than prior rejection
  - b. Board has already decided that unexpected results are convincing rebuttal evidence
- (3) Unexpected results are dramatic and were not contested before Board
  - a. Increased kinetic stability, 50-fold increased TNF-binding affinity with 1000-fold increased TNF neutralization potency
  - b. Markedly reduced or absent effector function (ADCC, CDC), failure to form aggregating complexes
